**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-17 are rejected under 35 U.S.C. 102(b) as being anticipated by

Williams(2003/0005331).

3. As per claim 1, Williams discloses a method of improving the security of computer communications over a connecting network including the steps carried out before a data packet enters the connecting network from a user domain of, tagging(i.e. labeling) the data packet from a user domain with a security level marking[0053, 0122], and appending the tagged data packet with a string formed from a check-sum made over the data packet[0199] and security level marking tag to form a datagram[0123].

4. As per claim 2, Williams discloses carried out as the datagram attempts to enter a second user domain, verifying the string in the received datagram matches a string calculated over the received data packet and security level marking tag[0036, 0053], and verifying the received security level marking tag matches the security level of the second user domain[0103, 0105, 0113, 0196]. The second user domain is disclosed in Williams, because Williams discloses Mandatory access control is implemented at the sending and well as receiving/destination hosts[0103]. The receiving hosts is located on the second user domain.

Art Unit: 2131

5. As per claim 3, Williams discloses encrypting each datagram before entry into the wide area network[0052, 0089, 0097].

6. As per claim 4, Williams discloses wherein datagrams from more than one user domain are encrypted by the same cryptograph(i.e. key)[0088-0089].

7. As per claims 5, 10, Williams discloses wherein the check-sum is a one-way hash function [0094].

8. As per claims 6, 11, Williams discloses wherein the one-way hash function is SHA-1[0074, 0097].

9. As per claims 7, 12, 15, Williams discloses recording any mismatch of checksum [0199] or security level marking tag [0196].

10. As per claims 8, 13, Williams discloses domain separator (i.e. NSC) for improving the security of computer communications over a connecting network arranged to carry out the method[0028].

11. As per claims 9, 14, 17, Williams discloses wherein the user domain security level marking is set by a physical switch on the device[0051, 0113, 0118].

12. As per claim 16, Williams discloses domain separator for improving the security of computer communications over a connecting network[0028].
